

Data Visualization with Python

Lecturer: Ivan Renesto

Course language

English

Course description and objectives

Visualization of analytical results is probably one of the most important aspects that people want to highlight, either in a presentation or in a report. It is the result of complex data pipelines, which might require merging, transforming and wrestling data. The course covers some of the most famous libraries for data visualization in Python. We will cover the basics, using Matplotlib, and then move to more advanced libraries to create more sophisticated plots.

Upon successful completion of this course, students should be able to:

- perform basic data transformations suitable for data visualization;
- translate analytical results into charts and plots;
- be familiar with Matplotlib and related Python libraries.

Audience

The course is targeted at:

- students who aim at improving their skills on data visualization using Python
- those who are curious on Data Visualization

However, note that the course is open to a restricted audience of Bocconi students.

More specifically, only students enrolled in:

- second or third year bachelor programs,
- any of the Bocconi Master programs, or
- any PhD or SDA programs

Prerequisites

Knowledge of Python programming language, having passed the curricular course 30424 Computer Science or having equivalent knowledge and skills.

Guidelines

Registration:

You can sign up for the course only through the yoU@B student Diary, in the "**sign-up for various activities**" box (please note that the box appears only when registrations open. Before then it will not be visible).

You can only cancel your registration by Diary **no later** than the registration deadline for the course itself. No other ways of cancellation are allowed.

Registration will be confirmed a few days before the start of the course through a message posted in the yoU@B student Diary.

Attendance:

- Attendance of **75% or more** of class hours: obtainment of the **Open Badge**
- Attendance of **less than 25%** of class hours: **Exclusion List**

Duration

16 hours

Teaching mode

This course will be taught **in person** only. Distance mode will not be provided.

Calendar

Lecture	Date	Time	Room
1	Mon 14/09/2026	18.15 - 19.45	N10 (L. Del Vecchio)
2	Tue 22/09/2026	18.15 - 19.45	N10 (L. Del Vecchio)
3	Thu 24/09/2026	18.15 - 19.45	N10 (L. Del Vecchio)
4	Tue 29/09/2026	18.15 - 19.45	N10 (L. Del Vecchio)
5	Thu 01/10/2026	18.15 - 19.45	N10 (L. Del Vecchio)
6	Mon 05/10/2026	18.15 - 19.45	N10 (L. Del Vecchio)
7	Mon 12/10/2026	18.15 - 19.45	N10 (L. Del Vecchio)
8	Wed 14/10/2026	18.15 - 19.45	N10 (L. Del Vecchio)

Syllabus of the course

Lecture	Topics	Book reference
1	Introduction to Visual Studio Code - Preliminaries - Walk through the development environment Introduction to Data Visualization - Importance of Data Visualization - Key Python libraries - Matplotlib history and architecture - Introduction to Jupyter Notebooks - Generating line plots - Exploring different types of plots <i>Exercises</i>	Ch. 1, 2, and 3
2	Matplotlib Anatomy and Plot Customization - Anatomy of a Plot - o multiple-line plots - o Figure and Axes - o title and labels - o markers - o colors - o legend - o text - o line styles - o subplots - o layout - Customizing a Plot - o plot titles - o text elements - o ticks and tick labels - o label alignment - Nonlinear plots - Annotations and arrows - Saving figures to file with savefig() <i>Exercises</i>	Ch. 4

Lecture	Topics	Book reference
3	Pandas for Data Visualization - Read and import CSV files with Pandas - Generate simple plots using Pandas - How to explore a dataset in Pandas - Building dataframes - Creating dataframes via dictionaries - Manipulate dataframes - o select data via <code>iloc[]</code> and <code>loc[]</code> - o add columns - o rename columns - o delete columns - o sort records - GroupBy and aggregation for visualization - Plotting directly from DataFrames <i>Exercises</i>	Ch. 4
4	Pie Charts and Colors - Changing colors of chart elements - Colormaps in Matplotlib - Color palettes and custom color schemes - Pie chart creation - Start angle and direction - Labels and percentage display - Label positioning and font properties - Exploded wedges - Wedge properties (edgecolor, linewidth) - Donut charts - Nested pie charts <i>Exercises</i>	Ch. 4

Lecture	Topics	Book reference
5	Bar Charts and Histograms - Bar colors and labels - Stacked bar chart - Grouped bar chart - Horizontal bar chart - Broken horizontal bar chart - BarContainer and Axes.bar_label() - Waterfall charts - Errorbars - Plotting categorical variables - Histograms - Set axes range (xlim, ylim) - Plots with different scales - Heatmaps with imshow() <i>Exercises</i>	Ch. 4
6	3D Plotting - Moving from 2D to 3D plots - plot(), scatter(), plot_surface() - changing camera angle with init_view - surfaces modeling with Wireframe 3D plots - Data preparation with NumPy.meshgrid() - 3D Charts: overview and use cases - o Plot 2D data on 3D plot - o 3D bar charts - o 2D bar charts in different planes - o 3D surface plots with colormaps - o 3D contour plots (contour3D, contourf) - Exploring other 3D plots <i>Exercises</i>	Ch. 4
7	Practicing with other Data Visualization libraries - Seaborn - o Understanding Axes and Figures - o Colormaps and Hues - o Basic plots - Bokeh - o Creating plots in Bokeh - o Visualization examples - GeoPandas <i>Exercises</i>	Ch. 5, 6, 10
8	Final Exercise	

Software used

Python, version 3.9+. Current version is 3.14.6.

Python interpreter can be downloaded for free from here:

<https://www.python.org/downloads/>.

Microsoft Visual Studio Code (VS Code), version 1.81+. Current version is 1.127.0.

Visual Studio Code is a free coding editor that helps to start coding quickly. It supports multiple programming languages, and the use of a Python web-based interactive computing platform (Jupyter Notebook).

Supported in: Windows 10 and 11 (64-bit and Arm64), macOS 11.0+ versions with Apple security update support (Intel chip, or Apple silicon), Linux Ubuntu, Debian, Red Hat, SUSE, or Fedora.

VS Code can be downloaded from here: <https://code.visualstudio.com/>.

Available seats

This activity is limited to **110** participants. Registration will no longer be possible once this limit has been reached or after the registration period has closed. Registration may be cancelled exclusively through the yoU@B Diary no later than the registration deadline for the course.
