

SYLLABUS First Year Ph.D., Econometrics 2

a Instructors

- Main instructor: Pamela Giustinelli
 - e-mail: pamela.giustinelli@unibocconi.it
 - office: 5-E1-14 (office hours by appointment)

- Teaching assistant: Francesca Garbin
 - e-mail: francesca.garbin@phd.unibocconi.it
 - office: 5-D2-08 (office hours by appointment)

b Timetable and Grading

This is a six-week course in Microeconometrics. Each week will feature two lectures by Giustinelli and one TA session by Garbin. The course will begin the week of February, 1 2021.

A list of topics covered by the lectures is provided below. The TA sessions will include Stata applications, review of material for/from the lectures, and problem set solutions.

The final grade will be determined on the basis of three problem sets (15% each, total 45%) and a final exam (55%). If you fail to hand in one or more problem sets, the corresponding portion of the grade will be determined by the outcome of the final exam.

You are welcome to work on the problem sets in groups; however, each student should hand in their own copy. When you submit a problem set, please indicate the names of the other students with whom you worked. Each student is expected to work on the final exam individually.

c Content

1. Intro to and Concepts in Microeconometrics (weeks 1-2)
 - (a) Intro to Microeconometrics
 - Definitions; distinctive features; some history
 - (b) Methodological Frameworks
 - Background concepts in causal and non-causal analyses (structure, exogeneity, counterfactual)
 - (c) Identification Concepts
 - Identification vs. statistical inference; point vs. partial identification
 - (d) Regression
 - Topics in conditional prediction with random and non-random samples (loss functions, extrapolation, parametric vs. nonparametric models, sampling processes)
 - (e) Microeconomic data structures
 - Types of data; data sources

2. Core Methods (weeks 2-4)
 - (a) Introduction to duration analysis (week 2-3)
 - (b) Panel data models (week 3-4)

3. Methods for Causal Inference (weeks 4-6)
 - (a) Potential outcomes framework (POF)
 - (b) Potential outcomes meet regression
 - (c) Selection on observables approaches

- (d) Selection on unobservables and Differences in differences (DID)
- (e) POF with imperfect compliance and instrumental variables (IV) as “quasi-experiments”
- (f) Regression discontinuity designs (RDD)

NOTE: This is a tentative schedule, the content or order of presentation might vary slightly depending on the pace of lectures and other organizational aspects.
